

Welcome

{mosloadposition inset} We can design a website specially for your needs. Are you ready to create a website that suits your needs?

Or perhaps you simply want to upgrade to a more "today" look and feel. If so, you've certainly come to the right place!

Our professional web developers can guide you in the right direction, whether you may already have a "vision", or you have a particular budget in mind. Simply contact us and we can give you a free, no obligation quote face to face. We can also organise domain names, web hosting and full control of updating & changing your website if you wish. Dynamic Designs make managing a web site easy. All our Hosting and Domain packages come with 'the Linux based CPanel' Control Panel. Add users, domains, email addresses and view statistics.

You can edit your own site through our Content Management System. Included in all web hosting packages is the Joomla! Content system enabling you to edit your website online. All you need to do is login to your website, click on the edit button of the page you would like to edit, make changes and press 'save'.

All our Hosting and Domain packages come with web mail. You are able to access your email, contacts and Calendar through the web mail interface.
